```
import matplotlib.pyplot as plt

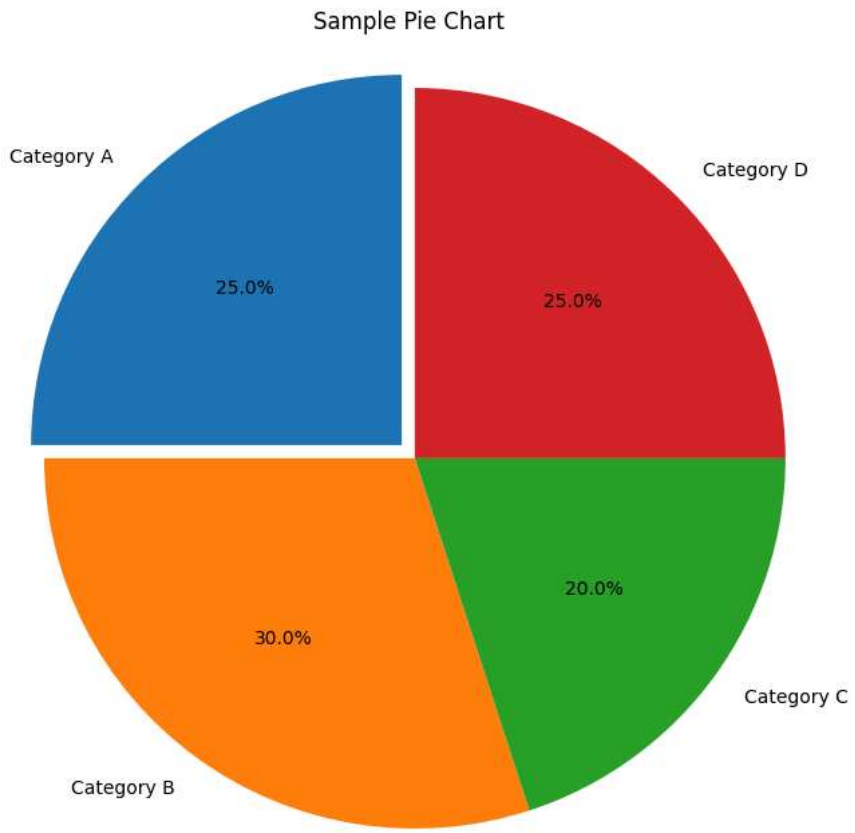
# Sample data for the pie chart
labels = ['Category A', 'Category B', 'Category C', 'Category D']
data = [25, 30, 20, 25]

# Create the pie chart
plt.figure(figsize=(8, 8))
plt.pie(data, labels=labels, autopct='%1.1f%%', startangle=90, explode=(0.05, 0, 0, 0))

# Add a title
plt.title('Sample Pie Chart')

# Ensure the circle is drawn as a circle.
plt.axis('equal')

# Display the chart
plt.show()
```



```
import matplotlib.pyplot as plt

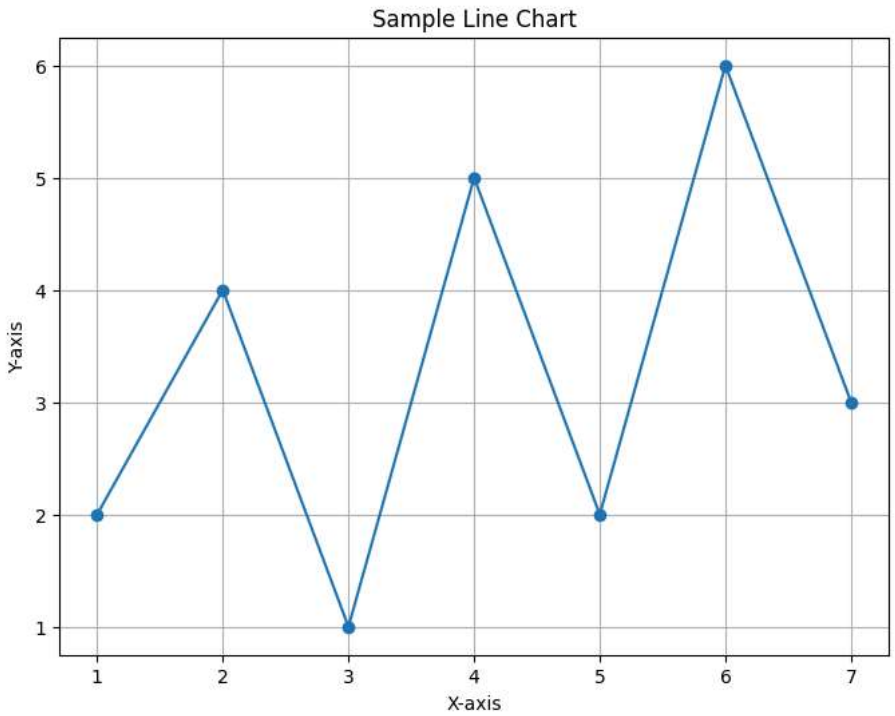
# Sample data for the line chart
x_line = [1, 2, 3, 4, 5, 6, 7]
y_line = [2, 4, 1, 5, 2, 6, 3]

# Create the line chart
plt.figure(figsize=(8, 6))
plt.plot(x_line, y_line, marker='o', linestyle='-')

# Add labels and a title
plt.xlabel('X-axis')
plt.ylabel('Y-axis')
plt.title('Sample Line Chart')

# Add a grid for better readability
plt.grid(True)

# Display the plot
plt.show()
```



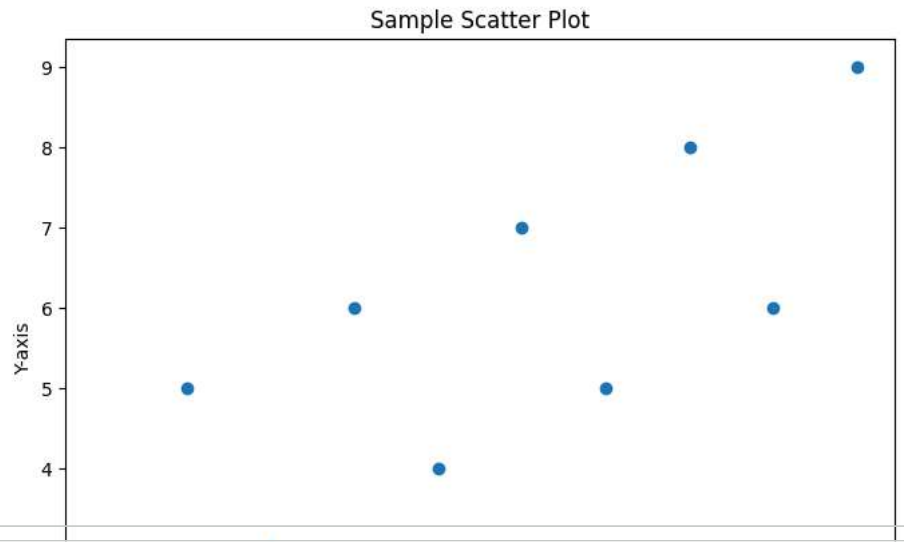
```
import matplotlib.pyplot as plt

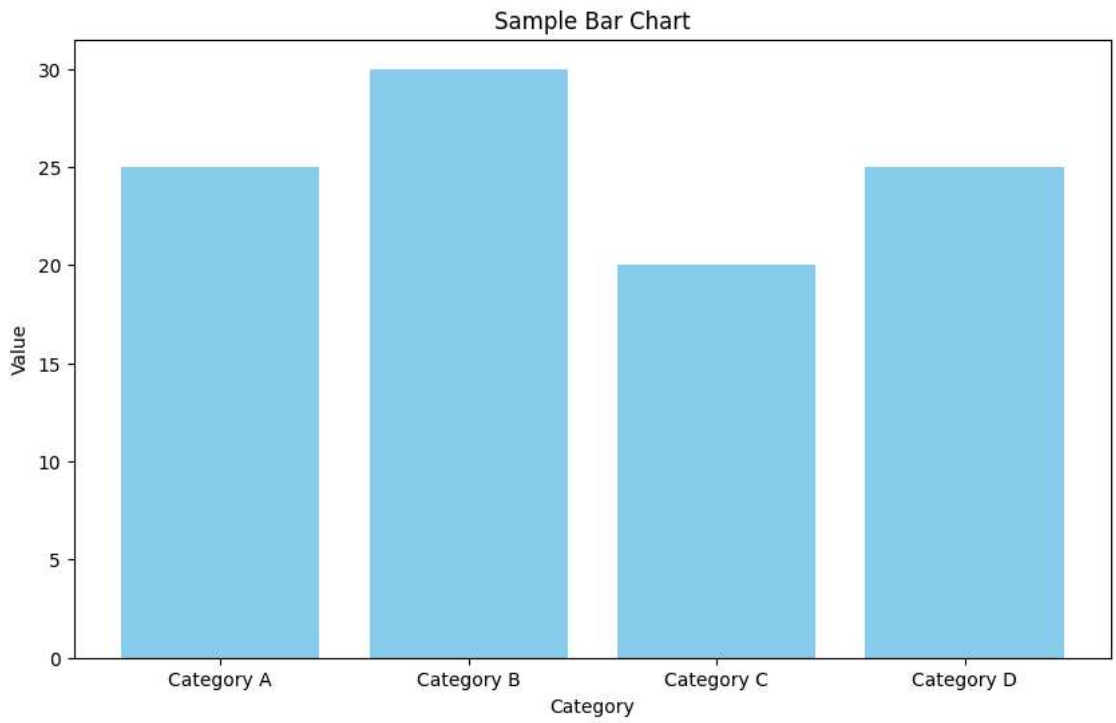
# Sample data for the scatter plot
x = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10]
y = [2, 5, 3, 6, 4, 7, 5, 8, 6, 9]

# Create the scatter plot
plt.figure(figsize=(8, 6))
plt.scatter(x, y)

# Add labels and a title
plt.xlabel('X-axis')
plt.ylabel('Y-axis')
plt.title('Sample Scatter Plot')

# Display the plot
plt.show()
```





```
import matplotlib.pyplot as plt

# Using existing 'labels' for x-axis and 'data' for y-axis

plt.figure(figsize=(10, 6))
plt.bar(labels, data, color='skyblue')

# Add labels and a title
plt.xlabel('Category')
plt.ylabel('Value')
plt.title('Sample Bar Chart')

# Display the chart
plt.show()
```
